

An exact SE(3)/SO(n)-equivariant JEPA world model generalises across the symmetry group: flat (a), seed-stable (b), and misspecification-robust (c)

(a) Flat across the group
(one wedge $\rightarrow$ whole orbit)

(b) Stable across 5 training seeds
(Step 17, real PushT closed loop)

(c) Robust to misspecification
(Step 16: prior costs, but still wins)
